Release Notes - Web Version

Course Manager (OPCM)

Item#	Configuration Area	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle
CORE-9572, CORE-9596	-	OPCM > Various Objects > Select Object > Assignments > User Selector	Yes	Enhancement	User Selector support has been extended to objects	Administrators can now use the User Selector feature set to assign or unassign users to objects using available user information, custom fields, parameters, or memberships. The existing assignment options remain available and unchanged. Please see the User Selector feature guide for more information on how to utilize selectors.	8.8
CORE-8653, CORE-9641	-	OPCM > Various > Reports	Yes	Enhancement	Optimization of report generation process	The report generation process has been optimized to reduce memory usage and reduce report processing times. All standard (non-custom) reports have been updated to utilize this optimization.	8.8
CORE-9707, CORE-9751	-	OPCM > Users & Groups > Groups > Select a Group > Dynamic Membership	Yes	Enhancement	"Empty" & "Is Not Empty" options added to User Selector filters	Within User Selectors, admins can now add comparators of "Empty" or "Is Not Empty" to most rules to allow for checking if certain fields do or do not have values for users.	8.8
EPICS-229	OPCM > Content > Courses	Various	Yes	Enhancement	cmi5 support added to OPLS	The OPLS has been updated to include cmi5 as a supported content type. cmi5 courses can be created via the Content Wizard, after which they can be utilized in a similar manner to other course content types. The Wizard now allows you to select cmi5 as a content type for any cmi5 content you produce. cmi5 playback requires OnPoint's new playback engine, Content Presenter.	8.8
EPICS-250	OPCM > Assessments > Questions	Various	Yes	Enhancement	New Upload Media and Display Media question types	Support has been added for two new question types, Upload Media and Display Media. The Upload Media type is limited to Interactive Assessments, and requires users to upload a video, audio, or image file for review by their managers. The Display Media type can be used in any assessment, and is used to insert a video, audio, or image file into an assessment without requiring a response, useful for when multiple questions are related to a single media item. A feature guide is being written to assist administrators with utilizing these new question types.	8.8
CORE-8992	OPCM > Events & Activities > Instructor-Led/Webinars > Select an Event	OPPM > Events > Select a Session	Yes	Enhancement	Managers can now set users to audit sessions	The session assignment page for users in OPPM has been updated to support auditing. Specifically if the event supports auditing, when selecting one or more users for assignment who have already attended a session, managers are given the additional option to assign the users as auditors instead of recertifying them or removing their previous session enrollment. In the 8.7 release users could only be set to audit sessions by administrators in OPCM.	8.8
CORE-9789	-	OPCM > Messaging > Monitor Queues > Notifications Queue	Yes	Enhancement	Updated Notification Queue to display Item Type for ad hoc notifications	Previously the Notification Queue did not display an Item Type for ad hoc notifications to group or interactive assessment assignees. This has been updated, and notifications of this type now appear with the appropriate Item Type in the queue.	8.8
EPICS-225	OPCM > Administration > Configurations > Classifications	OPCM > Various	Yes	Enhancement	All object types now support Classifications	Classification support has been extended to all object types, allowing for defining the available Classifications, setting and filtering for Classifications for each object, and utilizing the Classifications to control display behavior in UIs. Previously Classifications were available only for Groups and Events.	8.8
