Enhanced Mobile Access Control: Geofencing

OnPoint is adding support for "geofencing" to the CellCast mobile app to enhance our mobile access offerings for customers. Geofencing uses global positioning (GPS) coordinates to define a geographic boundary within which a user's configured CellCast app must be present in order to operate normally.

For example, users could be restricted from using their mobile app unless they are within a 1/4 mile range of their worksite, office building, retail store or some other pre-approved location. Geofencing relies on a defined longitude/latitude stored with a learner's account to ensure they can't access training when they are "off the clock" even if they are using their personal mobile device.

Hands-free Training?

An upcoming feature will enable learners to launch training assignments on their iPhones and iPads using Siri, the virtual assistant that is part of Apple's iOS operating system. OnPoint's CellCast App can use Siri's voice requests to control basic actions such as "Launch latest assignment" or "Play latest podcast." More options are planned so stay tuned!

Training Webinars

For the next ninety days, OnPoint's monthly classroom training in Savannah will be replaced with a series of webinars covering a variety of both basic and advanced Course Manager features. Administrators can sign up for any of the available sessions, so please review the schedule and agenda, and take this opportunity to update your knowledge in any system functionality of interest.

Upcoming Webinar Dates

OnPoint Virtual Admin Training - Events (ILT/Webinars)

May 7th, 11AM - 1PM EDT

Register Today

May 8, 11 M - 3 M EDT

Register Today

OnPoint Virtual Admin Training - Activities/Forums

May 14th, 11AM - 12:30PM EDT

Register Today
